Profile

Certified UI Path (RPA) developer and has 4 years of experience and specifically in RPA development. Has experience working with variety of customers and highly capable in the area of analyzing the business case, design workflow, develop BOT, test BOT, deploy and involved in post live support.

Professional Experience

Currently working as a RPA Developer in Capgemini has in-depth understanding of systems/software engineering life cycle phases and technology.

- End to end development of RPA solutions from process analysis to system study, automation assessment, PDD, Development, and documentation and solution implementation.
- Experience in Robotic Process Automation Tool, 'UI Path' to automate web applications, desktop application, maintaining excel, Image Recognition, PDF integration, OCR, RE Framework and UI Path Orchestrator.
- Integral part of building the Robotic Process Automation Centre of Excellence in the organization and contributed for the current growth of the CoE through client presentations, creation of PoC and developing live bots.
- Experienced Robotic Process Automation (RPA) Developer with a demonstrated history of working in the information technology and services industry where in have deployed live bots for different accounts.
- Hands on experience in automating Web, Desktop, SAP, Citrix, and Excel Applications
- Adept in Robotic Process Automation Life Cycle from requirement gathering, Solution designing, Process development, debugging, implementation and deployment, Production Support.
- Have knowledge on **Power automate desktop, Power automate**
- Deep Understanding in working on REST Web services
- Good knowledge of Java, HTML, and CSS
- Proficient knowledge in SQL Databases.
- Good experience on Onsite-Offshore project coordination
- Good verbal and communication skills
- Ability to learn and develop projects on new technologies and to take ownership of the entire process as well as ability to contribute and effectively coordinate with the team
- Pro-active, independent, self-starter.
- Ability to identify, prioritize tasks within resource and time constraints.
- High level of initiative and able to manage multiple tasks.
- Organized, self-motivated, enthusiastic, and proven rapid learning capability.
- Analytical and strong problem-solving skills.
- Proven multi-tasking skills and desire to resolve problems.
- Experience in working with various applications and systems such as web, desktop, mainframe, SAP, etc.
- Experience in conducting testing and debugging of automation solutions.

Project details

Project 1

Project: PO Validation and Delivery creation

Role : RPA developer

Objective: Purchase orders are verified at PO validation level based on business rules. POs that are eligible for delivery creation are listed with "Successful status" and in "Due Delivery " - column K "Delivery date status " according to defined DLT

calculation defined by business. User/Bot cross checks availability, verifies if delivery is already processed, cross checks if item is subject to exceptions (inspection, delivery block,ZHUR etc), generates delivery. At the end sends out output file for defined recipients' success and failure

Challenges: SAP selectors were changing dynamically, so these selectors were fine-tuned within vb script by including loops and tab name.

Solutions: BOT verifies the picking date/delivery date, packs delivery & verify foreign trade data at detail and header level ,verifies number of pallets and pallet weight after packing and checks output in vl03n transaction and finally sends out an email with success and failure status to respective ops.

Project 2

Project: Customer line clearing Process

Role : RPA developer

Objective: AB line is created by cash application when is difference between customer payment and invoice amount. Bot should clear these eligible AB lines based on business rules within SAP system for all the three regions

Challenges: Excel input file extracted was unstructured and also few line item has to be excluded with no proper logic.

Benefits: Expecting the manual effort from 10 To 1

Educational Qualifications

Bachelor of Engineering in Electronics and Communication in Adhichunchagiri Institute of Technology.

Key Certifications:

- UiPath RPA Developer Foundation Diploma
- UiPath Orchestrator
- Automation Anywhere Advance
- **Automation Anywhere Master Certificate**
- BluePrism object studio, Process studio, Surface Automation
- Power Automate desktop, Power automate, connectors

IT Skills:

- | | |
|--------------------------------|-------------------------------------|
| • RPA (UiPath) | • UiPath |
| • VB.Net, XML, HTML | • MS SQL |
| • MS Excel Macros | • Eclipse |
| • Learning Automation Anywhere | • Knowledge on Jason and Rest API's |
| • Excel Macros | • Preparing PDD, TDD, SDD |
-
