Professional Experience

3 years of profound experience as an RPA (Robotic Process Automation) developer in UiPath. Ensuring the bots would accurately mimic the human actions or Business Requirements.

Roles and Responsibilities:

- Hands on experience in designing and developing the RPA Bots (~15) using such as RE-Framework, Process Workflows, Queues.
- Maintaining the Production by deploying to Orchestrator, running, and scheduling the bots in Un-attended mode.
- Supporting the bots in Enhancement and Amendment from the business requirements.
- Debug and testing the bots in Attended bots.
- Collaborate with stakeholders to understand the automation opportunities and requirements.
- Creating the documentation which includes the process Flowchart, technical specifications, and guide to maintain and knowledge transfer.
- Extensive experience in the SDLC and Agile Approach.
- Ability to adapt to new technologies quickly and effectively.
- Strong analytical and problem-solving skills, Good at Being Assertive

Education Details

Degree	Specialization	University	Year of passing
Graduation	Computer Science Engineering	LBRCE	2021

Experience Details

Organization	Designation	Duration
TATA Consultancy Services (TCS)	Systems Engineer	(08/2021) – Till Date

Technical Skills

RPA – UiPath, Power Automate Basics

WEB Technologies – HTML, CSS, JavaScript, PHP

Programming Languages- Python, Java

Certifications- RPA Developer Foundation in UiPath (UIRPA), Python from Cisco.

Projects Profile

ProjectProfile#1: EDF Energies

Client	: EDF Energies
Organization	: TCS, Hyderabad

Role	: RPA Developer
Environment	: UiPath
Duration	: June 2023 – Till Date

Project Description: It is a UK based safe, low carbon electricity generating company where the work is to automate the Finance related repetitive tasks which can save time and human energy such as validating the bills, applying the taxes in their portal, extracting the reports from the SAP to analyze.

Few Bots Include:

- **Self-Billing Files-** Structuring the data from the unstructured billing files in to an excel file with required fields using Regex.
- **Upload Reconciliation in the Site-** Reconciling the bills from the report on the website before sending for review to the customers.

ProjectProfile#2: Total Energies

Client	: Total Energies
Organization	: TCS, Hyderabad
Role	: RPA Developer
Environment	: UiPath
Duration	: Nov 2021 – June 2023

Project Description: It is an Oil and Gas Generating Company where our job is to enhance the developed bots, optimizing the bots, supporting, and managing the production. Using the UiPath Studio – Created Reusable components and templates to develop the new bots which are required by the business such as Authenticating the User and giving accesses privileges to the users by the tickets raised. Resolving the Tickets of different categories by automating the bots etc.
