Career objectives:

As a Java full stack developer, seeking a position that challenges skills, updates current knowledge and sharpens thinking ability. Quick learning ability helps in developing a more rounded skill set and improving capabilities to achieve long term goals.

Work Experience and Employment Details

With 3 years of experience as a Java full-stack developer at Infosys, trained and developed expertise in various technologies. Worked as an API developer starting with designing an e-commers website from the first project. Currently involved in replacing some SAP applications with web site project for shipment company CMACGM. Proficient in various programming languages and frameworks ensuring robust and scalable solution. Consistently demonstrated strong problem skills and the ability to adapt new technologies and methodologies. **Technical skills :**

- Certified as Java, Java-Spring boot, Microservices, Spring-MVC, PostgreSQL , trained as Full Stack developer, Angular.
- C programming, PCB designing in CadStar software(version 13.0)

---Learning curve ---

Chat GPT, Sprint Boot-Java, Angular

Certification :

- Certified as Spring-boot developer, Java SE-8 developer, MySQL Associate, Java competent certification from Infosys.
- In Google Kick-start round G, I got a certification as I solved problems in that contest https://codingcompetitions.withgoogle.com/kickstart/certificate/summary/000000000019 ff c6

Education Details: B.E/B.Tech   --   2017-2021
Electronics & Communication Engineering @KL University – 8.6 CGP

Projects :

1. **Aqua: E-commerce Web Development**
   I have been working as a back-end developer(API) in an E-commerce web-based portal project for a shipment company in which the end user is a client here. Based on the login role he has access to sensitive modules. **The main agenda of this project is to create a website so that client(CMA CGM) will be able to manage/gather all its things needed by the end user, start from user endpoint and till it reaches the destination endpoint**. CMA CGM will create pricelines so that with the all the specifications like point of loading discharge, route selected, type of containers, type of mode (Rail/ road/ airways/ ships), type of payment methods and currencies, dates mentioned a transport system will be created along with the charges. Price calculation and charge generation will be based on the quotation request by end user. The portal can give access of creating quotation by the customers. An email will be generated and processed after accepting the request by CMA CGM to the quotation creating by end user. We are using Java as technologies and Spring boot frame work, micro services architecture. Tool likes **Spring tool suit, IntelliJ and Postgres database** to build the back-end services. For website design we have used Angular in our project.

2. **(Web Development) Replacement of some of SAP applications with site**
   On replacement of some of the SAP application we are designing a new web project for client to maintain the logs and provides efficient way to manage & store all business-related stuff such as customer data, financial records, employee information. It helps to access the of sales, shipments, containers, logistics etc., information easily.

3. **Billing System :** As part of my curriculum at college, on my own interest I have developed a billing code of a product. The bill generated will have details of customer in addition to data, time, service warranty, product warranty and details about product along with organization details. The information of the customer also needs to store in the form of files in the respective system storage or any kind of secondary storages. I used C programming language to implement this project.

Personal traits

- I do like programming and try to improve my logical ability. So, I will spend most of my free time in a global coding contest.
- Easily handle tasks individually and can collaborate in group work.
- Determinant & passionate towards my work and will show more interest in learning new things. I am also a self-motivated person.

Declaration :

I hereby declare that all the details furnished here are true to the best of my knowledge.
